

## **THE PLAN TO DISRUPT THE UNITED STATES**

**On the road again. Evacuating the firestorms, or threats of firestorms in besieged California...it's a good time to review the Wildlands Project and Smart Growth plan for the United States and the world.**

**Take a look at the actual fire limits in Sonoma County and then take a look at the huge evacuation area and even larger PG&E electrical shutoffs. Terror is a tool for implementing UN Agenda 21.**

**It takes a lot to destroy a large, established, successful economy like that of California, the largest in the US and the 5th largest in the world. One way is to interrupt and/or destroy the energy grid. As the lights go dark in California and PG&E holds us hostage to their re-insurers, we experience UN Agenda 21 / Sustainable Development in action. We'll be screaming for help and they'll give us just what they want: more restrictions on energy usage.**

**When you take this plan apart it's not about 'protecting the planet.'**

**The environmental movement is a mask for a plan to centralize control of all resources, natural and human, in the world. The Wildlands Project as conceived is actually a takeover of private lands and a justification for pushing people out of rural areas across the world. Burn them out, zone them out, restrict them out. Raise the fire insurance rates in rural areas, mismanage the forests so that dead trees and undergrowth choke them with tinder, have Medicare pay rural doctors less, close rural schools, monitor water wells...all of this moves people into the city centers. The green mask is that it would protect the wild animals. This might seem like a good idea to some but the questions Why? and How? must be asked and then it doesn't look so wonderful. Those pushing the Wildlands Project (Dr.Reed Noss et al) are the useful idiots who can be relied upon to propose the most extreme 'solutions' that make Sustainable Development happen. 'Clear all permanent human activity out of the rural areas.'**

**UN Agenda 21/Sustainable Development is an inventory and control plan. It is a plan for ultimately removing all boundaries and taking decision-making out of the hands of the governed, regionalizing governance and breaking down the nation-state. It calls for concentrating human populations in 'islands of human habitation': the mega-region massive city-states.**

**This plan was agreed to in 1992 by 179 nations, including the US. Although it was not a treaty, and Wikipedia will tell you that it's non-binding and voluntary, in fact it is binding on you through Clinton-era laws and regulations continued by the Bush and Obama administrations.**

**As written, the plan calls for 'data sharing' in every aspect of implementation. Data gathering, total information, is a fundamental part of this plan and includes every part of your life and everything on the planet. Total permanent surveillance. You can't control what you don't know you have. The inventory part of the plan is vital. Environmental plans require data gathering, sharing, and control. With the huge gap in economic classes developing into a nearly medieval state you'll be more likely to see a neo-feudalistic condition in the future. There will be those few who will benefit greatly from this plan. You will not.**

**Forests grow back. Animals return. At some point, in the near future, you will not. Research Smart Growth. Look at your town's plan.**

**Any extreme vision for the future is suspect. Such visions require extreme actions where the end justifies the means. This kind of mentality is dangerous when exhibited by those who see themselves as the ultimate arbiters of life for the common good.**

**THIS IS UN AGENDA 21. YOU ARE THE RESISTANCE.**
